

CABLE & COTTON

Instructions

Welcome to your new LED Lights

Thanks for purchasing a set of our British Design and quality, patented LED lights, which offer an innovative way to lighten up our classic cotton balls. Designed to fill the balls with light, these unique LEDs shine a constant light out from the base of the ball – Other LEDs give out an inconsistent light.

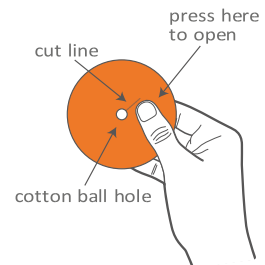

At 5v, they fit into a USB port making them highly versatile, and adaptable. We hope you get as much enjoyment out of them as we do. To help you create your perfect light set, here are some useful tips.

Please visit us on www.cableandcotton.com/help/fairy-light-assembly-guide/ for an easy to use video guide. We recommend this as the best way to help you set up the lights correctly.

1 LOCATE AND OPEN SLIT* IN BALL

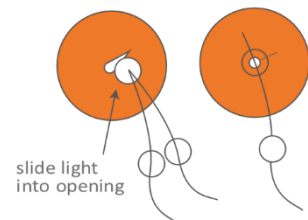

Take the ball between both of your hands with the hole at the top of the ball, so that your thumbs can press down gently but firmly around the hole to locate the split which is scored into the cotton to one side of the hole.

*All the slits are cut by hand to fit the LED's as perfectly as possible. Some slits will be a little too small (it's better than way too big !) so when putting the lights together have a pair of sharp nail scissors handy to make the slit a little bigger if needed.

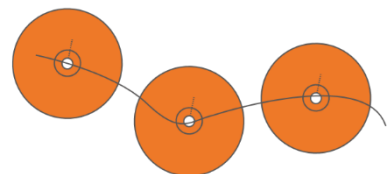

2 INSERT LED INTO SLIT

Remove your thumb from the split, to allow you to push the LED through the split into the fabric of the ball. Slide the cable towards the hole, where the LED will sit nice and snugly

3 PLUG IN & ENJOY

Plug your cable back into the USB port and see your beautiful new light set lit up !

TROUBLESHOOTING

Go to www.cableandcotton.com/help for general FAQs

The Cotton Ball Pushes in or dents when I try to insert the LED light

You can make the slit a little bit bigger with a pair of carefully applied nail scissors as this will make inserting the LED light easier. If the ball dents, you can always use a soft end of a pencil, by inserting it through the slit and pressing gently against the inverted area of the cotton ball to reshape it into a sphere once again.

Can't find the split in the cotton ball It takes a little pressure to locate the slit near the hole of the cotton ball, so don't be reluctant to apply a slight pressure in order to locate it. Some colours use a heavier dye than others so the cotton is quite robust to touch, and needs a firmer hand.

Occasionally a ball might not have the pre-cut split in it (due to the hand-made nature of the product) in which case you can create one using a pair of small scissors. The split needs to be 1 to 2 cm wide.
